You can play it in singleplayer too, but the other maps offer more interesting gameplay. This Stardew Valley farm layout is slightly smaller than a standard map, but still offers plenty of space for farming. NEXT: Stardew Valley: Tips To Help You Unlock The Legend Achievement Multiverse of Madness Retreads Wanda's Character Development From WandaVision Strategy Guides Stardew Valley Preference is everything in the end — what works and makes each player happy is a great build. Read also: Best farming games and simulators for Android But while you might have to trot around on your horse to save time, you won't have to travel far to mine some ore. Still, there are some great pointers that any Stardew Valley fan can get behind in the event they decide to seek out some tips. Each corner also has its own small pond to draw water from. Working around a simple starting build will always be easier and more satisfying in the end, rather than going through the trouble of breaking everything once other resources are unlocked later. Learning exactly how far crops can be planted around the sprinkler can help optimize a workday; knowing which crops need to manually be watered and which are already taken care of by the sprinklers. Crafting multiple machines can create a more organized look and daily work routine. 10 Learn Each Item's Area Of Effect The area of effect (or AOE) is the range in which a certain object's effect can reach and it is crucial to setting up not only the most aesthetic farm layout but the most efficient one as well. Players can use fences or even paths as a means of making clean lines of separation. This can go a long way in helping the atmosphere of the layout feel fresh and a little less plain. Some players build their layout around the idea of a "bigger picture", a layout that involves an aesthetic view from a wide, zoomed-out perspective that includes beautiful patterns and intricate designs. You can build multiple branching paths, fill the farm with coops, slime hatches, and anything else to your heart's content. 2 Big Picture Vs. All About The Details Every player is different. These creatures are unique to the map and scale in difficulty according to your level, so don't forget your sword if you want to do some late-night farming! You will also find a sprawling lake in the middle of the Wilderness layout too. It will help with making the layout feel less "cold" and barren with crops, sprinklers, and scarecrows going on for days. This presents a significant challenge because fishing, especially with early game equipment, is one of the hardest skills to master in Stardew Valley. Make use of barns and coops for storage: put your mayonnaise machines and cheese presses inside to create your artisan goods on the spot. 3 Place Artisan Equipment

near Their Respective Resources Having a good farm layout isn't just about how aesthetically pleasing the overall look is. Each level of sprinkler costs different materials in order to craft and have different areas of effect. This is incredibly valuable in the world of Stardew Valley. This makes it easier to quickly harvest plants and sell them via the wooden box next to your house. Popular These are selected renders that are popular by either views or in our Facebook community Useful Plans that show effective placement of some other tricks Latest Latest renders by render creation time Multiplaner allows you to simultaneously plan your farm with up to 4 players here, on the planner Go check it out! Planner is now also listed at NexusMods, leave a comment and endorse! Also don't forget our Facebook group! If you have any problems / issues / feature requests, don't hesitate to contact me Stardew Valley is one of the most wholesome games on Google Play, but don't be fooled by its cute surface! Beneath it, there are a lot of mechanics and strategies that can take hundreds of hours to master.But before you start your journey, there's one important decision you make: choosing your farm layout. However, as of the newest update, things such as the greenhouse and even the shipping bin can be relocated to any part of the farm plot. Focusing on both simultaneously without knowing which one to prioritize can make achieving the "perfect" layout difficult. Using a third-party application to plan out a layout can save not only time but also precious resources and money. This farm layout offers the second most tillable and buildable tiles, but at a dangerous price.In the darkness, Wilderness Golems come to haunt your farm. More Stardew Valley farm layout tips and tricks Whether you want to be efficient and maximize your farm's output or you want to create a cozy farm paradise, there are some tricks that will make your farming adventure easier. Forest farm layout 1413 tillable tiles, 77 non-tillable but build-able tiles If you want to feel at one with nature, the Forest farm layout might be just what you are looking for. These suggestions are especially valuable for newcomers to Stardew Valley who are still coming to grips with the game. Keeping all crops in their own categories/sections around the farm will help with both style and substance. Make sure to know which style of layout is the ultimate goal. This way, the grass inside the fenced area will grow continuously, allowing the animals to have lots of food to graze on during the day, without depleting the hay stored in the silo. Four Corners farm We're including the Four Corners farm here, but in reality, it's intended for multiplayer use. It will also help with the layout's overall look and functionality in the long run. 4 Don't Focus Solely On Crops Another great addition in the newest 1.5 update is the ability to place certain pieces of furniture outside. Ensuring that all items farmed from animals can be processed at the beginning of a day is crucial. This allows you to quickly build up resources in the early game, but also to customize the land to your liking in the late game. Don't allow crops to get unruly or equipment to be set up wherever seems okay for the time being. Instead of manually watering each and every crop with a watering can, the player can opt to craft sprinklers. Riverland farm layout 1587 tillable tiles, 516 non-tillable but build-able tiles The Riverland farm is almost certainly the prettiest of the lot, but it's without a doubt the most difficult farm layout to master. However, we still think this might be a steep hill (top) to climb for beginners. 5 Don't Be Afraid To Craft Multiples Of Items Sometimes the fear of ruining an aesthetic can keep players from achieving maximum efficiency on their farm. Players may find it preferable to have one designated area for all their machines that transform any animal resources (ie. Hill-top farm layout 1648 tillable tiles, 930 non-tillable but build-able tiles Living in a house on the top of the hill might offer the best views, but this Stardew Valley farm layout is a bit trickier than the previous two. This Stardew Valley farm map might have the least tiles, but it makes up for it with mystery, plentiful ponds, and rare resources.What does this mean exactly? Remember that the zoom feature can be toggled to help keep focused on which layout style to keep in mind as the ultimate end goal. These are unique in that they are tillable, but cannot have sprinklers. You can find many of the same fish that are available in the Cindersnap forest lakes, but the chance for trash is still higher on the farm. Livestock need hay and although it is a good idea to invest in a silo to store all hay that is cut from the land, it's much more cost-effective to build a large fenced area around the livestock housing to allow animals to roam free during the day. As developer ConcernedApe devotes his time to always giving back to his supporters in the form of free patches, the tips and tricks to optimize a playthrough remain ever-changing and growing. Taking the extra time and effort will feel most satisfying in the end when the layout finally comes together, with no obstacles ruining its aesthetic. It's still a good pick even for relative beginners thanks to its plentiful resources. However, making room for duplicate machines can pay off in terms of aesthetic and efficiency. There's just a small area of dirt where sprinklers are viable, so you'll have to come up with new ways to water your crops or change your strategy completely.There are a few benefits, however, as supply crates and other goodies will wash up on your shores. Not only does this give the farm a much better look in terms of biodiversity, but it is also cheaper than constantly purchasing grass/hay as cutting grass only yields a 50% chance that the 1 hay is added into the silo's inventory. Each Stardew Valley farm layout has its unique challenges and benefits, which we'll explore in our guide. This farm layout contains a hilltop area that is home to stones and ore nodes, which can be mined for early resources without having to slay Slimes. There are only so many hours in a day in the wonderful world of Stardew Valley. Thus, it's natural for everyone's "perfect" farm layout to be unique from one another. It takes up valuable space close to your front door, so your farming plots will have to be more spread out.Nevertheless, the Wilderness farm layout is not prohibitively hard. Not only is this aesthetically pleasing, but it also helps when it comes to harvesting, as the crops of the same kind (and same quality) will stack with each other. Placing all machines nearby their respective barn house can drastically save time dropping off extra items at the shipping bin to create more inventory space. Read also: The ultimate Stardew Valley fishing guideEven if you catch on fast, fish are simply not as lucrative as crops. Updated August 24th, 2021 by Christine Mendoza: As Stardew Valley continues to be a go-to comfort game for many fans, its popularity is still going strong. It divides your farm into six sections accessible via bridges or stairs.While that may look intriguing, it means that the Hill-top farm layout has fewer tiles you can use for building and planting compared to the standard map. We think it's a small price to pay for all the other rewards you will reap. Fishing is also great here since you can catch more valuable ocean fish. Make sure your coops and barns are close together and have a shared grass area for easy access. It's also about how well the farm functions as a profitable business. Whether they're aiming for a cozy build or an extravagant one, here are a few simple (yet effective) tips that can help any player make their beloved farm layout amazing. Here is what we recommend: Put your farm plots as close to your entrance as possible. The Forest farm will be hard to optimize for beginners, however, so we recommend avoiding it on your first playthrough. Don't let an item ruin a layout plan; instead, take the extra step to move whatever object is in the way. That said, this farm layout is best left to only the most experienced players who are looking for new challenges in Stardew Valley. Here, fresh produce will need to be replaced by fresh fish.The map is almost entirely covered with water, which means crop tiles are few and far between. Read also: Stardew Valley friendship and marriage guideThe standard farm layout is also great for Stardew Valley beginners because it contains many valuable resources — plenty of trees, stumps, and stones. Losing an entire day just to break down a previous build and set it up all over again is not only a waste of time but a waste of precious energy as well. Try livening up the farm area with realistic resting areas or flowery decorations. 8 Use Online Farm Layout Planners Don't be afraid to look for resources outside of the game to help plan out the perfect farm layout. Although it can be tempting to get rid of any pesky patches of grass to keep a cleaner-looking farm layout and to optimize crop and furniture space, try not to rid the land of all of its greenery! Any livestock animals that are housed on the farmland require their own upkeep in the form of food. The same principle goes for the usage of scarecrows; while they do their job and scare animals away from eating the crops, they still have a limited area of effect. For extra convenience, the most important points have been highlighted and two new tips have been added to the ever-growing collection. 6 Use Fences Or Paths To Organize Areas Seeing each bunch of crops sectioned out in their own respective areas can make the overall layout of a farm look clean and efficient. Sometimes it can be easy to simply go with the flow and build around the already given locations of some of the items and buildings that are unlocked throughout the game. While meant to help its audience achieve a sense of relaxation and fun, some new players can't help but feel pressured to clean up their plots a bit to try and be lavish as some of the farms these incredible fans have created. Allowing the grass to grow only within these areas will save a lot of time and money in the long run. Plant trees in the greenhouse to save space. The only downside of the Standard farm is that both of the ponds on your land are bereft of fish, so you'll need to take do your angling somewhere else. It also makes optimal placement of buildings and farm plots a lot more challenging. milk, eggs) into a more valuable item. It features two areas with large stumps, which can be cut down for renewable hardwood and much more.Any lazy farmer who doesn't want to disturb nature will also be happy to know that you can find plenty of forage items on this map. It's best to keep these numbers in mind to help keep all crops healthy and safe from night critters. In the beginning stages of the game, it is important to keep all crops watered and cared for on a day-to-day basis as for a while, they will be the only real source of income. There are plenty of helpful sites out there when it comes to helping players map out their ideal layout. Let's get into it! The best Stardew Valley farm layouts Standard farm layout 3427 tillable tiles, 235 non-tillable but build-able tiles Standard might sound boring, but this Stardew Valley farm layout is the best for any aspiring agricultural mogul. Once a new machine (such as the loom or cheese press) has finally been crafted, it can be easy to think it's a "one and done" situation. Only crafting one of each machine can lead to lower profits while waiting for each resource to transform, before selling them for their maximum value. Beach farm is, as the name implies, comprised almost entirely of sandy tiles. Watering and tending to crops can be a tedious process, yet nonetheless must be done every day. If you do have some Stardew Valley experience, however, the Hill-top farm layout may provide a nice change of scenery and a decent challenge. Animals need to be tended to every day if you want quality products. If you persevere, however, you can eventually create a water farm by littering crab pots everywhere.We don't recommend the Riverland farm layout for Stardew Valley beginners, but we do think it's an excellent choice for experienced players who want to try a different playstyle. Beach farm 2700 tillable tiles, 1928 non-tillable but build-able tiles The newest Stardew Valley farm layout will force you to entirely rethink the concept of a farm. While no Lovecraftian horrors will climb out of it to drag you into the depths, its placement is rather inconvenient. Clearing them out requires some back-breaking labor (or should we say finger-breaking), but you will need them later on for upgrading your house and building other structures. Well, it resembles the Secret Woods area to the South of your farm. Neglected crops won't grow and can even be eaten by crows by the morning time. Meanwhile, other players are all about the intricate details. Even without a clear vision, it's best to keep things as organized as possible from the beginning. Android GamesStardew Valley Although the world of Stardew Valley is a relaxing one, it's no doubt that its dedicated fanbase has taken in-game farm design to new heights. Sometimes it can be difficult to fix up the entire field while also making time for selling crops and tending animals. There's also a lot of variety here, with each corner emulating a different farm type: Forest, Standard, Hill-top, and one more with a pond.Obviously, this is the best map for multiplayer, but for single player we'd recommend sticking to one of the others for a more genuine Stardew Valley experience. They will produce fruit year-round! Dedicate a small outside area to storage, and color-code your chests for easy access. 1 Build Around Your Final Design From The Beginning For those beginning their journey, it's a good idea to avoid being lazy and growing crops wherever is convenient for the time being, thus leaving the heavy lifting for later on. Fishing will also drain your energy pretty quickly. This way, players don't have to go through the long process of trial and error in-game. It has the highest number of usable tiles, i.e. space you can plant and build on. Placing furniture outside will make the overall feel of the farm more realistic and "lived-in". Wilderness farm layout 2131 tillable tiles, 444 non-tillable but build-able tiles If monster combat and harsh terrain are to your liking, the Wilderness farm layout is ready to test your resolve. Finally, we recommend checking out this Stardew Valley planner — it allows you to test how every layout works and plan your dream farm. Trees can also grow on sand, so you'll still have a decent supply of wood early in the game. On top of that, it also helps when replanting the seeds once the first batch has been harvested. However, in a game where time is everything, dealing with tight inventory/pocket space can dampen efficiency. 7 Don't Be Afraid To Make The Move Moving buildings and other various bigger objects can be a great option when trying to make space. This includes berry bushes that can be harvested in spring and autumn, map-exclusive weeds that drop mixed seeds, and any juicy seasonal fruits and vegetables.The forest farm's ponds are also more useful.
